Underground Fuel Storage Tank Replacement at the Justice Center

CITY COUNCIL MEETING | October 22, 2024

Aging Infrastructure/ Expanding Capacity

01

Current underground storage tank (UST) was installed in 1991, which is well beyond its 30-year lifespan.

02

Senlac Service Center is the only location for diesel fuel, requiring fire trucks to use public gas stations.

03

Additionally, there is only one diesel fuel site with no backups in the event of an emergency.

04

Proactive replacement is essential to avoid costly emergency repairs and potential fines.

Proposed Solution: Above Ground Fuel Tank Installation

01

Remove and Replace UST with 15,000 gallon dual fuel above ground storage tank.

02

Improved efficiency for PD and FD and provides critical backup diesel fuel capacity

03

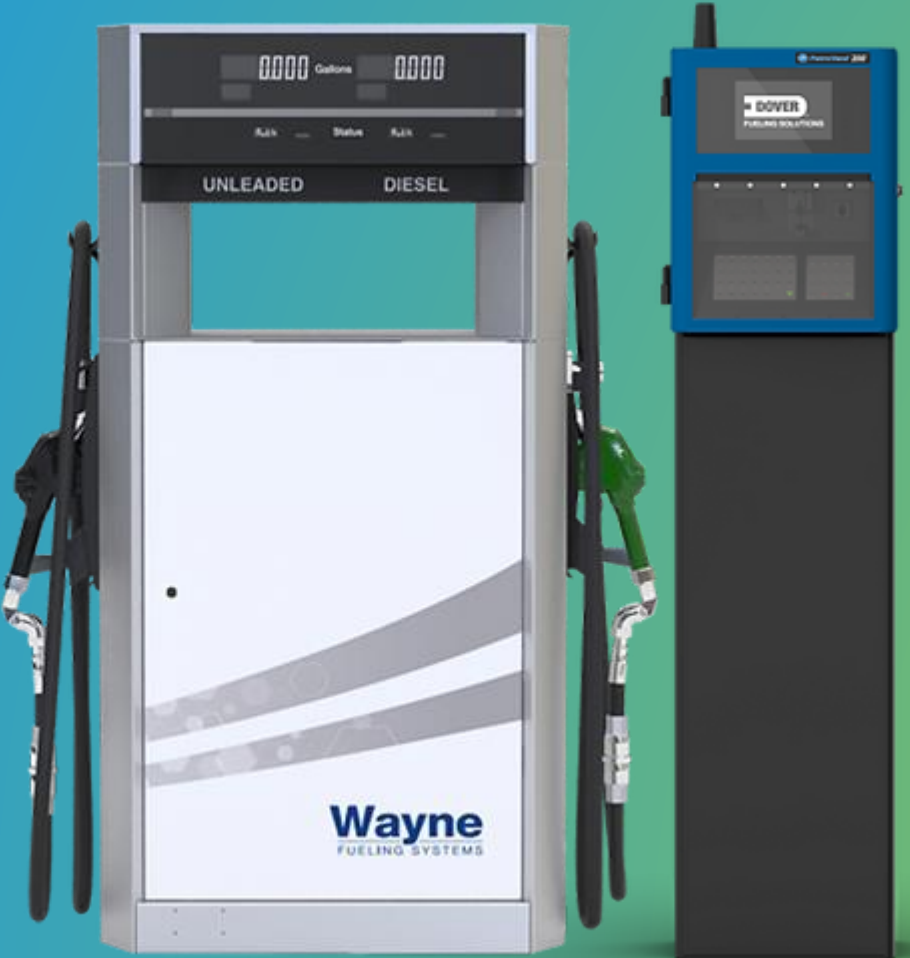

Enhanced safety & leak detection eliminating soil contamination risks with a UST

04

Enhance the Justice Center secured area by increasing its size and widening its gate.

Product Photos: Dispenser, Terminal, Tank, Fence

Budget and Timeline

Estimated Cost: \$582,135.84

Funding: ARPA Funding

Timeline: Spring 2025

Contractor: Stovall C.C.

Buyboard Contract #673-22
